

Trinity High School Students Participate in Career Readiness Experience at Hapchuk, Inc.

December, 2018

Thanks to a partnership with Mr. Dave Hapchuk at Hapchuk Inc, Trinity High School Small Gas Engine classes were given the opportunity to travel to the LAD (Liquid Assets Disposal) facility in Wheeling WV for an excellent career readiness experience. While there, students toured the LAD facility, the sister-company of Hapchuk, Inc.

LAD is a privately owned and operated pre-treatment facility that provides an environmentally secure and state approved non-hazardous liquid waste treatment and disposal operation. After receiving an all inclusive tour and background information about the plant, students learned about all of the connecting businesses that are required to make this business a success. This partnership has enabled the Small Gas Engine students to understand the career opportunities and experiences necessary to be successful in business, as well as increasing the level of their education. They talked with an employee, who also has a small gas engine business on the side, about time management and tips of the trade.

The group also met the sales representatives from Hill International, a heavy and medium-duty truck and trailer dealership with locations in Ohio, Pennsylvania, and West Virginia. They received information about their career opportunities and information about their paid internship experiences!

Thank you, Mr. Dave Hapchuk for your commitment to our school by providing career readiness experiences at your company as well as reaching out to local companies on our behalf.
