<b>Course: AP Calculus BC Grade(s): 12</b>	<b>Overview of Course</b> (Briefly describe what students should understand and be able to do as a result of engaging in this course): The purpose of this course is to prepare students for college and for the Advanced Placement exam. Students will explore and solve mathematical problems, think critically, and communicate ideas clearly. Students will evaluate all material presented in class numerically, graphically, and conceptually. This will be done through the use of classroom discussion, small group work, bell ringers, and assigned projects. Students will study algebraic, geometric and graphical concepts of calculus as well as linear, quadratic, exponential and logarithmic functions, series and sequences, polar coordinates, vectors, and trigonometry. Students will learn to evaluate these functions numerically, using the first and second derivative tests, evaluating tables and graphs of derivatives to create functions, and estimating using Euler’s Method to name a few. At the completion of the course students will have a comprehensive knowledge of functions, derivatives, integrals, and series and how each topic applies to the conceptual understanding of calculus. Students will represent the basic ideas of calculus through numerical, graphical, algebraic and written formats. Students will be asked to explain the meaning of concepts as well as perform the mathematics represented by the concepts. Students will demonstrate their understanding of the basic ideas of calculus through classroom discussion, written explanations, and constant review of previously presented topics.
--	---

**Overarching Big Ideas, Enduring Understandings, and Essential Questions**  
(These “spiral” throughout the entire curriculum.)

<b>Big Idea</b> (A Big Idea is typically a noun and always transferable within and among content areas.)	<b>Standard(s) Addressed</b> (What Common Core Standard(s) and/or PA Standard(s) addresses this Big Idea?)	<b>Enduring Understanding(s)</b> (SAS refers to Enduring Understandings as “Big Ideas.” EUs are the understandings we want students to carry with them after they graduate. EUs will link Big Ideas together. Consider having only one or two EUs per Big Idea.)	<b>Essential Question(s)</b> (Essential Questions are broad and open ended. Sometimes, EQs can be debated. A student’s answer to an EQ will help teachers determine if he/she truly understands. Consider having only one or two EQs per Enduring Understanding.)
<b>Limits</b>	<p><b>CC.2.1.HS.F.1</b> Apply and extend the properties of exponents to solve problems with rational exponents.</p> <p><b>CC.2.1.HS.F.2</b> Apply properties of rational and irrational numbers to solve real world or mathematical problems.</p> <p><b>CC.2.1.HS.F.4</b> Use units as a way to understand problems and to guide the solution of multi-step problems.</p> <p><b>CC.2.1.HS.F.5</b> Choose a level of accuracy appropriate to limitations on measurement when reporting quantities.</p> <p><b>CC.2.2.HS.D.1</b> Interpret the structure of expressions to represent a quantity in terms of its context.</p> <p><b>CC.2.2.HS.D.2</b> Write expressions in equivalent forms to solve problems.</p>	<p><b>EU 1.1: The concept of a limit can be used to understand the behavior of functions.</b></p> <p><b>EU1.2: Continuity is a key property of functions that is defined using limits.</b></p>	<p><b>EK 1.1C1:</b> Limits of sums, differences, products, quotients, and composite functions can be found using the basic theorems of limits and algebraic rules.</p> <hr/> <p><b>EK 1.1C2:</b> The limit of a function may be found by using algebraic manipulation, alternate forms of trigonometric functions, or the squeeze theorem.</p> <hr/> <p><b>EK 1.1C3:</b> Limits of the indeterminate forms <math>\frac{0}{0}</math> and <math>\frac{\infty}{\infty}</math> may be evaluated using L’Hospital’s Rule.</p> <hr/> <p><b>EK 1.1D1:</b> Asymptotic and unbounded behavior of functions can be explained and described using limits.</p> <hr/> <p><b>EK 1.1D2:</b> Relative magnitudes of functions and their rates of change can be compared using limits.</p> <hr/> <p><b>EK 1.2A1:</b> A function <math>f</math> is continuous at <math>x = c</math> provided that <math>f(c)</math> exists, <math>\lim_{x \rightarrow c} f(x)</math> exists, and <math>\lim_{x \rightarrow c} f(x) = f(c)</math>.</p> <hr/> <p><b>EK 1.2A2:</b> Polynomial, rational, power, exponential, logarithmic, and trigonometric functions are continuous at all points in their domains.</p> <hr/> <p><b>EK 1.2A3:</b> Types of discontinuities include removable discontinuities, jump discontinuities, and discontinuities due to vertical asymptotes.</p> <hr/> <p><b>EK 1.2B1:</b> Continuity is an essential condition for theorems such as the Intermediate Value Theorem, the Extreme Value Theorem, and the Mean Value Theorem.</p>

**Trinity Area School District  
AP Calculus BC Curriculum Map**

**CC.2.2.HS.D.3**

Extend the knowledge of arithmetic operations and apply to polynomials.

**CC.2.2.HS.D.4**

Understand the relationship between zeros and factors of polynomials to make generalizations about functions and their graphs.

**CC.2.2.HS.D.5**

Use polynomial identities to solve problems.

**CC.2.2.HS.D.6**

Extend the knowledge of rational functions to rewrite in equivalent forms.

**CC.2.2.HS.D.8**

Apply inverse operations to solve equations or formulas for a given variable.

**CC.2.2.HS.D.9**

Use reasoning to solve equations and justify the solution method.

**CC.2.2.HS.D.10**

Represent, solve, and interpret equations/inequalities and systems of equations/inequalities algebraically and graphically.

**C.2.2.HS.C.1**

Use the concept and notation of functions to interpret and apply them in terms of their context.

**CC.2.2.HS.C.2**

Graph and analyze functions and use their properties to make connections between the different representations.

**CC.2.2.HS.C.3**

Write functions or sequences that model relationships between two quantities.
